# WEATHER OF CONCERN

## Weather of Concern

### NORTHERN CALIFORNIA

- Fire weather concerns exist for far northeastern California through this evening, 08/19/18.
- The San Joaquin Valley Air Pollution Control District will keep the Air Quality Alert in effect for the mountain and foothill portions of Madera, Fresno, and Tulare Counties due to smoke impacts from the Ferguson wildfire west of Yosemite National Park. The Air Pollution Control Districts in Mariposa and Tuolumne Counties have also issued Air Quality Alerts for their counties.
  - The Air Quality Alerts will be in effect until the fire is extinguished.
  - Exposure to particle pollution can cause serious health problems, aggravate lung disease, cause asthma attacks and acute bronchitis, and increase risk of respiratory infections.

### SOUTHERN CALIFORNIA

- Dry and breezy interior conditions with elevated fire weather conditions exist through at least Tuesday.
- Monsoonal moisture will increase Monday through Tuesday, allowing for a returning chance of thunderstorms for the mountains and deserts. That chance will be short lived, as drier air moves in on Wednesday through late week, shutting off the monsoonal thunderstorm activity.

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

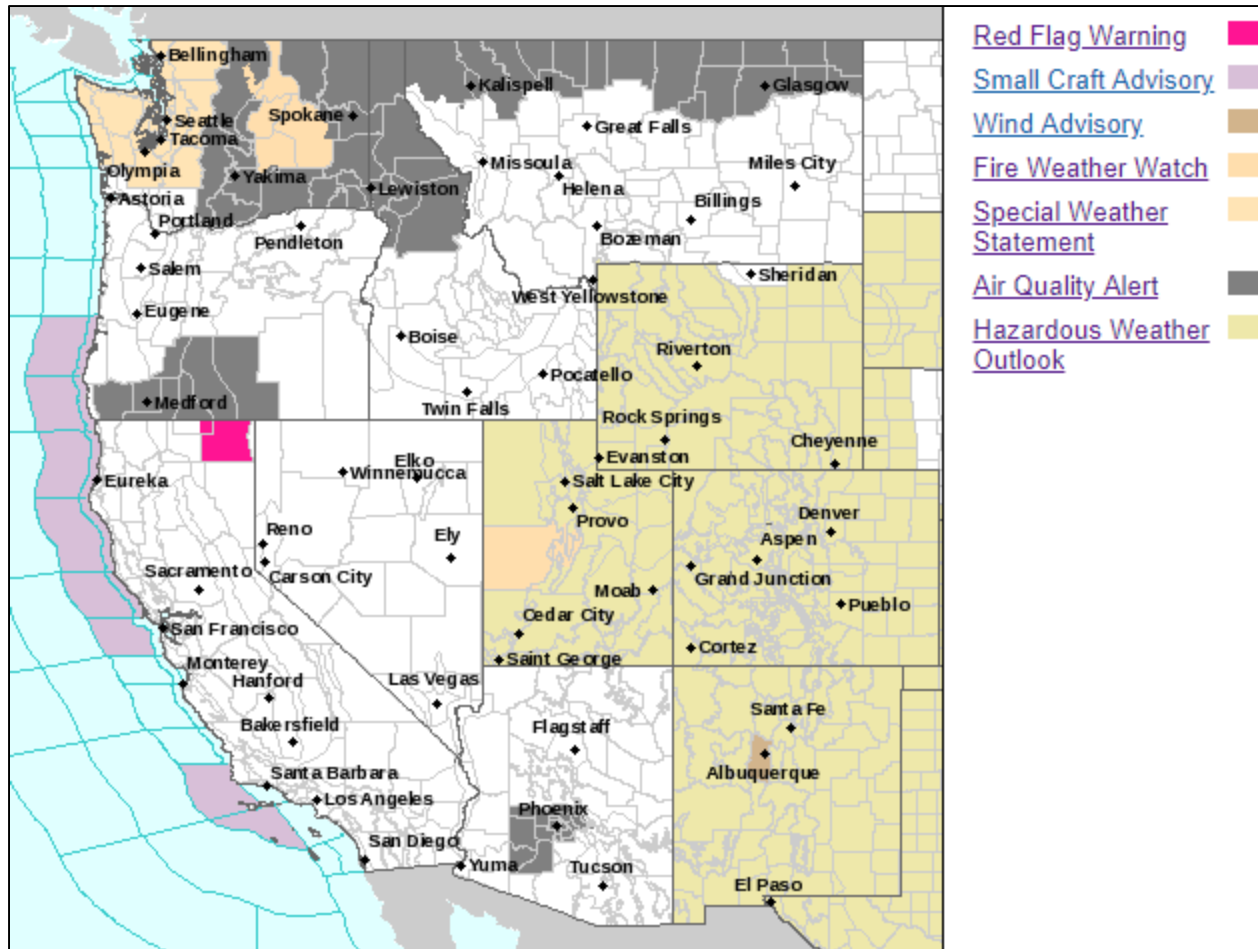

Expect another day of above normal temperatures today, with gradual cooling early this week. Dry weather is expected this week. Areas of smoke and haze will continue, especially near wildfires. Breezy conditions are expected this afternoon and evening ahead of the trough. Relative humidity values will continue to be low during this time and with the expected increase in winds, critical fire weather conditions will be met in southern Modoc County. Seasonably warm/hot weather will continue across interior Northern California later in the week as a weak trough lingers along the West Coast. Breezy winds possible at times over higher terrain.

## **SOUTHERN CALIFORNIA**

High pressure aloft centered over Southern California will peak through Sunday, then move back over New Mexico for the rest of the week. Temperatures over the interior sections will peak this weekend as a result then lower a few degrees on Monday and change little through the week. Temperatures throughout the week will stay above average, but not to excessive levels and it will continue to be humid near the coast with nighttime and morning low cloudiness. Minimum humidities will remain in the 10 to 15 percent range. Over the coastal and valley areas, generally little change expected to the temperatures and humidities with some marine layer influence. Breezy west to northwest winds will continue over the interior areas and Santa Barbara County, with gusts between 25 and 35 mph common. The winds will become southwesterly on Monday and Tuesday, then turn northerly again Tuesday night through the end of the week. The winds look strongest over Santa Barbara County, where gusts between 35 and 45 mph and humidities dropping into the teens are possible by the end of the week. There is a brief opportunity for mountain and desert thunderstorms Monday and Tuesday afternoon, but that chance fades mid to late week as much drier air moves into the area.
